SOLUTIONS FOR PETROCHEMICAL OIL AND GAS APPLICATIONS

Kidde® Fire Systems' products save people and property from the dangers of fire. Not a simple task where oil and gas are an ever present part of your daily work, or where petrochemicals are processed, stored or distributed.

The proper application of fire suppression systems for these hazards requires experience and specialized equipment. That's where Kidde Fire Systems' expertise comes in. With nine decades of protecting POG hazards, we understand their unique demands.

Consider an offshore drilling platform. Protection requires covering multiple hazards in a confined, highly flammable environment; it's often difficult to evacuate personnel; fire fighting resources are limited to those available on the platform; equipment is subjected to extremes in weather and constant exposure to salt spray; there are serious environmental considerations associated with a fire; assets are very valuable and loss of any production capacity is unacceptable.

Unlike structural fire protection in which conventional methods, such as smoke detectors, manual fire alarms, water sprinklers and smoke control systems are used, every special hazard has its own unique set of requirements.

The method for protecting a museum is very different than the approach used to detect and suppress fires on an offshore drilling platform or other POG facilities.

Kidde Fire Systems offers a unique approach to fire protection for these special hazards—integrated total system solutions. Kidde offers a complete fire protection package that starts with early fire detection and ends with quick fire suppression. The detection systems are on-guard 24-hours a day. When a fire is detected, sophisticated control equipment is deployed to take specific actions like turning off power to sensitive equipment, redirecting or closing valves, notifying personnel and releasing a wide variety of application specific fire suppression agents. From wet and dry chemical to high and low pressure CO₂ to our full line of ECS™ Clean Agent solutions, Kidde has your needs covered.

When you choose Kidde, you've chosen the world's most respected name in special hazards fire protection.
